Weapon Station No						
Missile Serial No						

Instructions for Use

1. MOD Form 706C(Storm Shadow) is used to record and certify the loading of Missile Mission Data File and GPS Cryptographic. Whenever a MMDF or GPS Crypto is loaded to the missile during preparation or loading, the supervisor is to raise and prepare the MOD Form 706C(Storm Shadow), as follows:
 - a. Enter the Unit Prefix and Serial No.
 - b. Record and certify the MMDF Serial No in the first block.
 - c. Record and certify GPS Crypto loading in the second block.
 - d. Enclose the form in a waterproof container and attach it to the weapon.
2. Any subsequent change to the MMDF or GPS Crypto is to be recorded and certified in the next available block by the person effecting the change. The superseded block is to be struck through.
3. On loading, the Weapon Loading Team NCO is to enter the Aircraft Serial No and Weapon Station No and insert the form into Section 4 of the MOD Form 700 immediately after the MOD Form 706(A/C Type), where used, or MOD Form 705(A/C Type).
4. Where the weapon is downloaded and retained for further use, a new MOD Form 706C(Storm Shadow) is to be raised by the Weapon Loading Team NCO as detailed in Paras 1a to 1c. The old form is to be destroyed.
5. Where the missile is expended, the Weapon Loading Team NCO is to complete the Weapon Expended block and return the completed form to Armament Control to assist completion of monthly weapon expenditure returns.
6. Where the missile is downloaded and to be returned to storage the MMDF and GPS Crypto are to be erased. The Weapon Load Team NCO is to record and certify the next available block "Erased" and return the form to Armament Control to assist in the completion of records.
